Real-life players "All eyes on the ball" "If you had 13 cameras recording player and ball positions in a real-life football match, you'd find that FIFA's cameras keep their focus on the ball. They never stray from it. They don't get distracted by the player who is passing them, their own teammate, or any other part of the action, including the crowd." "We're expecting incredible realism, but we are also looking to create emotion and drama in FIFA's game. There are a lot of great players out there that make the sport exciting, but there are also many out there who don't. We've brought together the best players we could find to give you better access to some of the most exciting parts of the sport." "This is FIFA and this is football, after all." FIFA 22 features 14 improved player traits and over 170 new player animations. HyperMotionTM and Player Impact "FIFA's unique player animation system is built to simulate real-life movement and tackle physics. Our goal is to make the game come alive. This is why we've started working on the new "HyperMotion" technology, which captures and analyzes real-life player movement data in motion capture suits during a complete, high-intensity football match." "The data collected from these real-life player movements, tackles, aerial duels and on-ball actions are used to power all of the on-field actions, interactions and animations in FIFA 22. Players can move with real players in real-time, tackle and win ball possession in stunning visual fidelity." FIFA 22 features 14 improved player traits and over 170 new player animations. On The Mark "You're a real-life player, so we gave you a real-life player's physiology and natural movement. The game will go to "on the mark" when you take your shot, not when your foot hits the ball. This is the same design we used in FIFA 18. Our goal was to allow you to take a successful shot every time - you won't miss, and your team will feel as if you were running as fast as possible towards the ball." The little details
